 Source: Instituto Nacional de Estadísticas de Chile (INE) – Newsletter Number 274 – September, 8th 2021.

MARKET OUTLOOK:

The third trimester of the year is closing with an 8.02% vacancy, 1.33% smaller compared to the last trimester and 53% bigger than the inter-annual level. This small drop in vacancy is due to a better performance in leasing in the following submarkets: Apoquindo, Nueva Las Condes and Nueva Providencia. On the other hand, the Santiago Centro submarket is showing one more time a rise in availability and has reached 8.97% with the price of 0.38 UF/sqm, the lowest value since 2016.

In the last trimester, a rise in the tendency towards on-site working has been noticed. However, and even though net absorption data reaffirms this tendency, it is yet too soon to confirm a massive return to offices. It is necessary to consider that there are still several factors to solve, such as continuity in the vaccination process, practices implemented regarding reduced capacity and the influence of telework and hybrid work.

SUPPLY AND DEMAND:

The net absorption this trimester reached 5,916 sqm, the first positive figures after 12 months with negative levels. In other words, there was a bigger amount of surface released than the amount of surface leased. The submarkets that have not experienced this recovery yet are Santiago Centro and El Golf, which present a negative absorption of 3,137 sqm and 2,751 sqm, respectively.

The Apoquindo submarket stands out for having the greatest amount of leased surface, 4,670 sqm. Most of it is leased by companies in the area of business services.

It is still possible to find opportunities, especially due to the position of landlords who are willing to negotiate and have more flexible contracts. This has provoked the migration of some companies to neighborhoods with better connectivity, services and building level, located in the east side of Santiago. The Providencia and Santiago Centro submarkets have adjacent availability that includes furniture, which makes them a good alternative to lower the moving costs.

PRICE:

The price has experienced a quarterly fall of – 1.84%, while inter-annually it has experienced a fall of 5.17%, reaching a 0, 55 UF/sqm. This is explained by the low activity in office leasing in general and the intentional drop of prices in submarkets where vacancy has remained the same and/or increased, like in the case of Santiago Centro.

Regarding the price in dollars, it has been reduced 8.77% compared to the previous trimester, product of devaluation of the Chilean peso as a result of the fluctuations of the copper price and the economic and political contingencies of the country.

ECONOMIC OUTLOOK

The last report of the Central Bank, 'Monetary Policy Report', reveals that there has been a quick recovery from the recession caused by the pandemic. This recovery is partly due to the adjustment of companies and people, as well as the advance in the vaccination, which has meant an important step towards the opening process. However, after growing between 10.5 and 11.5 this year, the economy is projected to experience a deceleration, and then to grow between 1.5 and 2.5% in 2022, and between 1 and 2% in 2023.

Regarding the labor market, the INE (National Institute of Statistics, by its Spanish initials) shows a gradual generation of employment opportunities, where the formal salaried employment is close to return to its average levels in 2019. This means the market is recovering a substantial part of the impact generated by the pandemic.

The inflation in the short term is projected to grow and to reach an annual value of 5.7% in December, being over 5% during most of 2022. This can be explained by the strong consumption dynamism, the devaluation of the peso and a global and local supply that has not been recovered.

Regarding the external situation, the global activity is still recovering, although at different levels in the different countries, due to uneven vaccination processes and the incidence of the Delta variant.

FUTURE OUTLOOK

The problems generated by the high demand of equipment and scarcity of workforce have provoked a general delay in every construction project of class A offices; tower 3 of the "Mercado Urbano Tobalaba" project has been postponed for next year.

The projects that could enter in the fourth trimester are: 63,194 sqm and a remnant of the 44,000 sqm left in Costanera Center tower 2, subjected to municipal permits.

In case these projects do not experience any delays, it is expected that the availabilities at the end of the year will grow again and reach a double-digit vacancy (%).
